

Premium control panel :

The CC200 control panel series is 100% custom to meet the most specific control management needs of the commercial kitchen exhaust systems.

The controller can communicate with inverters or other controlles via a CAN open and Modbus communication protocol. The CC200 system allows remote control via internet for technical support and supervision.

All operations are made via the touchscreen. The CC200 system is programmed with self-diagnostic functions in case of fault, offering a list of solutions depending on the problems encountered.

Specifications	
Installation	Wall-mounted or embedded
Boitier	Painted steel 16 MSG; Gray polyester finish or stainless steel
Voltage	120V
Amperage	15A
Standard	 Nema 4

Controls available :

- Exhaust system with one or multiple exhaust fans;
- Air supply system (MUA) with faults management;
- SMART variable system with multiple exhaust fans;
- SMART variable system with modulating dampers and multiple exhaust fans;
- Control communication and display of frequency inverters errors;
- Fire protection system functions management:
 - Cooking equipment, exhaust hood lights and air supply shut-off,
 - Cooking equipment reset;
- Air purification unit control with continuous filters status display;
- Remote control and wired supervision;
- Remote control and BacNet supervision;
- Remote supervision via Internet;
- Exhaust laundromat system;
- External alarm system integration for communication and display such as cold room.
