Control Panel CC200 Series

Premium control panel

The CC200 control panel series is 100% custom to meet the most specific control management needs of the commercial kitchen exhaust systems. The controller can communicate with inverters or other controller via a CAN open and Modbus communication protocol. The CC200 system allows remote control via internet for technical support and supervision.

All operations are made via the touchscreen. The CC200 system is programmed with self-diagnostic functions in case of fault, offering a list of solutions depending on the problems encountered.

Specifications

Installation	Wall-mounted or embedded
Casing	Painted steel 16 MSG; Gray polyester finish or stainless steel
Voltage	120V
Amperage	15A
Standard	(SA) Nema 4 or 4x

*Specifications and performances are typical and may change without notice.

Controls available

→ Exhaust system with one or multiple exhaust fans;

→ Air supply system (MUA) with faults management;

→ DTECH variable system with multiple exhaust fans;

→ DTECH variable system with modulating dampers and multiple exhaust fans;

→ Control communication and display of frequency inverters errors;

→ Fire protection system functions management:

　— Cooking equipment, exhaust hood lights and air supply shut-off,
